Predicting Road Accident Severity

ICT 324 Project Kickoff

Problem and Research Question

This project addresses the **bias in detecting fatal crashes** by evaluating model accuracy and imbalance strategies, aiming for improved recall rates using a multi-year severity model validated against recent data.

Data and Analysis

This project analyzes TRAMS (TRansport Accident Management System)incident records from 2019 to 2026, focusing on **understanding trends** in road accidents across Thailand's highway network, ensuring comprehensive data access for effective model training and evaluation.
